Getting started

Try sharing a moment

This planner focuses on gradual fat loss. Some athletes temporarily reduce body weight before weigh-ins. Weight naturally fluctuates day to day — focus on trends.

About ACWR

The Acute:Chronic Workload Ratio (ACWR) compares your 7-day average load to your baseline. Research suggests the "sweet spot" is **0.8–1.3** — below this suggests detraining, above 1.5 indicates injury risk elevation.

Baseline window: 28 days → 14 days → 7 days as your history builds.

Based on: Gabbett, T.J. (2016). The training-injury prevention paradox: should athletes be training smarter and harder? *British Journal of Sports Medicine*, 50(5), 273–280.

Daily stress rating is personalised to your baseline. ACWR tracks your weekly load trend.
